A patient with an RT-PCR confirmed case of COVID-19 without symptoms.

A patient with mild symptoms and stable vital signs. Unless the patient belongs to high-risk subgroups or has comorbidities, they are often not admitted to a treatment facility.

A patient with clinical signs of non-severe pneumonia

A patient with clinical signs of severe pneumonia or severe acute respiratory infection

A patient with impending or ongoing respiratory failure, in need of mechanical ventilation, or with evidence of end-organ damage or with septic shock.

Note. A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities must be admitted to a treatment facility. Severe or critical cases must be admitted to a treatment facility, regardless of inclusion in high-risk subgroups or presence of comorbidities.

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS

CONFIRMED DEATHS BY DATE OF DEATH

NOTES:

1. Bars with dark green colors indicate the actual date of onset or date of death for cases reported from August 16 to August 22, 2021.
2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
3. **Owing to delays in reporting, case counts in the gray shaded area are still most likely incomplete. Hence, we urge caution in interpreting data beyond this date.** Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

COVID-19'S CAPACITY TO SPREAD (R_t VALUE)

October 15: 0.853 ± 0.02

October 16: 0.858 ± 0.02

**Time-varying
Reproduction number**

The time-varying **reproduction number (R_t)** indicates the possible number of people being infected by a sick person, at a specific time with control measures in place.

IMPORTANT NOTE. The reproduction number is measured using symptom onset, we do not include in the interpretation the past 14-16 days given the time between symptoms, health seeking, testing, and reporting. When interpreting the reproduction number keep in mind that it is a **lagging indicator (that is, it provides a snapshot of the situation two weeks ago)**. Please do not expect this number to change daily.

- The reproduction number (R_t) was around 2 early on in the outbreak. This meant that each confirmed person with COVID was infecting 2 other people.
- Based on the latest data, we are 95 percent confident that $R_t = 0.858 \pm 0.02$, which means each infected individual was infecting an average of 0.858 other persons **around two weeks ago**.
- **Lowering this value is made possible through efforts such as social distancing, wearing of PPE, and other means to stop the spread of the virus.**
- **The goal is for R_t to be less than 1**, which would mean that, on average, an infected person is infecting less than one person, eventually stopping the transmission of COVID-19.

BEHAVIORAL MESSAGES

- To control the COVID-19 cases in the country, the DOH reiterates the importance of staying at home and following other protocols to ensure that no transmission will take place, especially now that the country is celebrating All Souls' Day and All Saints' Day. Everyone should also wear mask inside the house if there are vulnerable individuals living with them (ie. senior citizens, etc.) and ensure proper air ventilation. In case that the person experiences any symptoms, he/she should contact the BHERTs assigned to their community for proper assistance and to follow the set guidelines isolation. Together, we can BIDA safety in our communities.
- The government reminds everyone to follow simple practices that would reduce exposure to COVID-19 like wearing face masks and face shields at all times, maintaining physical distancing, practicing proper hand hygiene, and avoiding poorly ventilated or crowded areas, especially in workplaces and public areas. Do this not just for yourselves, but also for the safety of your family and the community.
- As the deployment of vaccines has started, everyone is encouraged to only be allowed to be vaccinated with Food and Drug Administration approved vaccines. Vaccines under the Emergency Use Authority shall suffice as the temporary approval for the COVID-19 vaccine to be used. Healthcare workers, Senior citizens and adults or children with co-morbidities are encouraged to be vaccinated. However, let's not be reliant on vaccines as the health protocols are still the most effective way to stop the spread of COVID-19.
- Everyone is enjoined to stay healthy both physically and mentally. Eating a well-balanced diet, that includes plenty of fruits, vegetables and food rich in proteins is the best way to get all the essential nutrients we need for good health and normal immune function. Avoid eating high-sodium and high-sugar food. Avoid smoking, exercise daily, drink lots of water to avoid dehydration, and get an average of seven to eight hours of sleep as recommended.
