Nationwide Cases Data

Weekly Cases by Date of Onset of Illness

For 63.0% or 2,325,422 of cases where date of onset of illness is unreported, date of specimen collection was used as proxy.

We urge caution when interpreting data during the highlighted period below, which may be incomplete because of delays in reporting.

Note: There are still 720115 cases with unreported date of onset of illness and date of specimen collection.

Provincial and regional totals may slightly change daily because by default, the current address as reported in the case investigation form is used, whenever available. Continuing follow-up of the patient after public announcement ascertains their region, usually the region where they are admitted or quarantined and this may be different from the region of the current residence.
