Died

Breakdown of Active Cases

A patient with an RT-PCR without symptoms.

A patient with mild symptoms A patient with clinical confirmed case of COVID-19 and stable vital signs. Unless the patient belongs to high-risk pneumonia subgroups or has comorbidities, they are often not admitted to a treatment

signs of non-severe

A patient with clinical signs of severe pneumonia or severe acute respiratory infection

A patient with impending or ongoing respiratory failure, in need of mechanical ventilation, or with evidence of end-organ damage or with septic shock.

Note. A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities may be admitted to a treatment facility. Moderate, severe or critical cases must be admitted to a health facility, regardless of inclusion in high-risk subgroups or presence of comorbidities. Non-severe pneumonia: fever, cough, dyspnea or respiratory rate of 21-30 breaths/minute, oxygen saturation more than 92% at room air for adults, and cough or difficulty in breathing and fast breathing or chest indrawing for children

Severe pneumonia: fever, cough, dyspnea or respiratory rate of more than 30 breaths/minute, oxygen saturation less than or equal to 92% at room air for adults, central cyanosis, oxygen saturation less than 90%, fast breathing, very severe chest indrawing for children

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS (NATIONWIDE)

CONFIRMED DEATHS BY DATE OF DEATH (NATIONWIDE)

Notes.

- 1. Bars with dark green colors indicate the actual date of onset or date of death for newly-reported cases.
- 2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
- 3. Owing to delays in reporting, case counts within the gray area are still incomplete. Hence, we urge caution in interpreting data beyond this 14-day cutoff. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS (DISAGGREGATED)

Mindanao

Notes.

- 1. Bars with dark green colors indicate the actual date of onset or date of death for newly-reported cases.
- 2. The cases from the "NCR" graph have been separated from cases of the "Luzon" graph.
- 3. Owing to delays in reporting, case counts within the gray area are still incomplete. Hence, we urge caution in interpreting data beyond this 14-day cutoff. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

COVID-19'S CAPACITY TO SPREAD (R. VALUE)

December 26: 0.97 ± 0.02 December 27: 1.02 ± 0.02

Time-varying Reproduction number

The time-varying **reproduction number** (R_t) indicates the possible number of people being infected by a sick person, at a specific time with control measures in place.

IMPORTANT NOTE. The reproduction number is measured using symptom onset, we do not include in the interpretation the past 14-16 days given the time between symptoms, health seeking, testing, and reporting. When interpreting the reproduction number keep in mind that it is a **lagging indicator (that is, it provides a snapshot of the situation two weeks ago)**. Please do not expect this number to change daily.

- The reproduction number (R₁) was around 2 early on in the outbreak. This meant that each confirmed person with COVID was infecting 2 other people.
- Based on the latest data, we are 95 percent confident that $R_t = 1.02 \pm 0.02$, which means each infected individual was infecting an average of 1.02 other persons **around two weeks ago**.
- Lowering this value is made possible though efforts such as social distancing, wearing of PPE, and other means to stop the spread of the virus.
- The goal is for R₂ to be less than 1, which would mean that, on average, an infected person is infecting less than one person, eventually stopping the transmission of.

UTILIZATION OF COVID-19 BEDS

Note. The number of confirmed severe and critical cases may not necessarily correspond to occupancy of ICU beds and mechanical ventilators as suspect and probable cases in severe or critical condition also utilize these resources. Facilities which did not submit a daily utilization report have their most recent carry over to today.

Notes.

- 1. The DOH is continuously validating the number of positive individuals as reported by the laboratories. When necessary, they are deduplicated. As such, the discrepancy with the number of confirmed cases does not necessarily reflect backlogs in case validation.
- 2. Please visit www.doh.gov.ph/covid19tracker for details regarding the testing output per laboratory.
- 3. A 6 PM cut-off for the situation report is used, and so the numbers presented here are not yet final. A few laboratories submit data between 6 PM and the time the public data drop is generated.
