### Breakdown of Active Cases

A patient with an RT-PCR confirmed case of COVID-19 without symptoms.

A patient with mild symptoms and stable vital signs. Unless the patient belongs to high-risk subgroups or has comorbidities, they are often not admitted to a treatment facility.

A patient with difficulty breathing, altered mental status, considered high-risk or in need of hospital care.

A patient with impending or ongoing respiratory failure, in need of mechanical ventilation, or with evidence of end-organ damage.

**Note.** A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities must be admitted to a treatment facility. Severe or critical cases must be admitted to a treatment facility, regardless of inclusion in high-risk subgroups or presence of comorbidities.

### CONFIRMED CASES BY DATE OF ONSET OF ILLNESS

### CONFIRMED DEATHS BY DATE OF DEATH

#### Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for cases reported from August 9 to August 15.
2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
3. **Owing to delays in reporting, case counts in the gray shaded area are still most likely incomplete. Hence, we urge caution in interpreting data beyond this date.** Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

## CONFIRMED CASES BY DATE OF ONSET OF ILLNESS (DISAGGREGATED)

### Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for newly-reported cases from June 28 to July 4.
2. The cases from the “NCR” graph have been separated from cases of the “Luzon” graph.
3. The cases from the “Region VII - Central Visayas” graph have been separated from the “Visayas” graph.
4. Owing to delays in reporting, case counts within the gray area are still incomplete. Hence, we urge caution in interpreting data beyond this date. The axis for dates have been relabeled to better reflect data before gray area. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

## COVID-19’S CAPACITY TO SPREAD ( $R_t$ VALUE)

October 2:  $0.94 \pm 0.02$

October 3:  $0.92 \pm 0.02$

**Time-varying  
Reproduction number**

The time-varying **reproduction number ( $R_t$ )** indicates the possible number of people being infected by a sick person, at a specific time with control measures in place.

**IMPORTANT NOTE.** The reproduction number is measured using symptom onset, we do not include in the interpretation the past 14-16 days given the time between symptoms, health seeking, testing, and reporting. When interpreting the reproduction number keep in mind that it is a **lagging indicator (that is, it provides a snapshot of the situation two weeks ago)**. Please do not expect this number to change daily.

- The reproduction number ( $R_t$ ) was around 2 early on in the outbreak. This meant that each confirmed person with COVID was infecting 2 other people.
- Based on the latest data, we are 95 percent confident that  $R_t = 0.92 \pm 0.02$ , which means each infected individual was infecting an average of 0.92 other persons **around two weeks ago**.
- **Lowering this value is made possible through efforts such as social distancing, wearing of PPE, and other means to stop the spread of the virus.**
- The goal is for  $R_t$  to be less than 1, which would mean that, on average, an infected person is infecting less than one person, eventually stopping the transmission of COVID-19.

## BEHAVIORAL MESSAGES

- While the country continues to respond to the COVID-19 pandemic, the measles and polio situation demands serious and urgent attention to avoid impending outbreaks and to protect the lives of children. The Department of Health, with support from the World Health Organization and UNICEF, will be conducting a nationwide measles, rubella, and polio supplemental immunization activity (MR-OPV SIA) campaign.
- Measles, rubella, and polio are highly contagious and can all lead to death but they are also all vaccine-preventable diseases. Measles and rubella can cause severe complications while polio causes lifetime paralysis. There is no cure for such diseases but vaccination is the safest and most effective way to prevent them.
- Just like all the other vaccines in the routine immunization program, measles and polio vaccines have been proven safe and effective and we have been using these in the Philippines for more than 40 years already.
- Parents and guardians are encouraged to get their child vaccinated (< 5 years old) from measles, rubella, and polio. On October 26 to November 25, there will be an extensive vaccination in Regions 1, 2, MIMAROPA, CAR, 5, and whole of Mindanao for free.
