Breakdown of Active Cases

A patient with an RT-PCR confirmed case of COVID-19 without symptoms.

A patient with mild symptoms and stable vital signs. Unless the patient belongs to high-risk subgroups or has comorbidities, they are often not admitted to a treatment facility.

A patient with difficulty breathing, altered mental status, considered high-risk or in need of hospital care.

A patient with impending or ongoing respiratory failure, in need of mechanical ventilation, or with evidence of end-organ damage.

Note. A person who is classified as having a mild case of COVID-19 but is considered high-risk due to age or the presence of comorbidities must be admitted to a treatment facility. Severe or critical cases must be admitted to a treatment facility, regardless of inclusion in high-risk subgroups or presence of comorbidities.

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS

CONFIRMED DEATHS BY DATE OF DEATH

Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for cases reported from August 9 to August 15.
2. In cases where date of onset of illness is unreported, date of specimen collection was used as proxy. Cases that do not have both are not accounted for in the date of onset histogram. As of this situation report, around 10% of cases have unreported dates of specimen collection and onset of illness.
3. **Owing to delays in reporting, case counts in the gray shaded area are still most likely incomplete. Hence, we urge caution in interpreting data beyond this date.** Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

CONFIRMED CASES BY DATE OF ONSET OF ILLNESS (DISAGGREGATED)

Region VII - Central Visayas

Notes.

1. Bars with dark green colors indicate the actual date of onset or date of death for newly-reported cases from June 28 to July 4.
2. The cases from the "NCR" graph have been separated from cases of the "Luzon" graph.
3. The cases from the "Region VII - Central Visayas" graph have been separated from the "Visayas" graph.
4. Owing to delays in reporting, case counts within the gray area are still incomplete. Hence, we urge caution in interpreting data beyond this date. The axis for dates have been relabeled to better reflect data before gray area. Rest assured that the DOH continues to work tirelessly to ensure the timely reporting of accurate data.

COVID-19'S CAPACITY TO SPREAD (R_t VALUE)

September 25: 0.86 ± 0.02

September 26: 0.89 ± 0.02

**Time-varying
Reproduction number**

The time-varying **reproduction number (R_t)** indicates the possible number of people being infected by a sick person, at a specific time with control measures in place.

IMPORTANT NOTE. The reproduction number is measured using symptom onset, we do not include in the interpretation the past 14-16 days given the time between symptoms, health seeking, testing, and reporting. When interpreting the reproduction number keep in mind that it is a **lagging indicator (that is, it provides a snapshot of the situation two weeks ago)**. Please do not expect this number to change daily.

- The reproduction number (R_t) was around 2 early on in the outbreak. This meant that each confirmed person with COVID was infecting 2 other people.
- Based on the latest data, we are 95 percent confident that $R_t = 0.89 \pm 0.02$, which means each infected individual was infecting an average of 0.89 other persons **around two weeks ago**.
- **Lowering this value is made possible through efforts such as social distancing, wearing of PPE, and other means to stop the spread of the virus.**
- The goal is for R_t to be less than 1, which would mean that, on average, an infected person is infecting less than one person, eventually stopping the transmission of COVID-19.

DAILY POSITIVITY RATE

This week, an average of **34,036** samples were processed each day by 134 licensed COVID-19 testing laboratories.

From 4 October to 10 October 2020, a total of 17,541 specimens tested positive, which brings this week's positivity rate to 7.8%. Of these, 1,999 (11%) came from labs in CALABARZON, and 8,971 (51%) came from labs in NCR.

In terms of positivity rates, 12.4% of individual specimens (1,999 out of 16,058) tested positive in CALABARZON labs, while 7.4% of individual specimens (8,971 out of 121,273) tested positive in NCR labs.

BEHAVIORAL MESSAGES

- Even during the transition to the New Normal era, relevant health concerns should also be prioritized. In light of the National Mental Health Week celebration (October 11-17, 2020), people are encouraged to stay mentally and physically healthy by engaging in healthy activities that you enjoy and find relaxing. If one must stay home or in isolation, maintaining a healthy lifestyle, which includes a daily routine, exercise, eating healthy food, getting enough rest and good sleep, praying or finding quiet time for yourself, and enjoying moments with family and loved ones, can help maintain positive mental health during this time.
- **It is okay not to feel okay.** In situations of extreme stress, one can expect not to feel okay. Talking or venting feelings to somebody you trust is helpful in overcoming negative feelings due to stress. Talking with a mental health professional is also okay – people should not be afraid of feeling judged and stigmatized for doing so.
- Healthcare workers may be subjected to stigma due to the nature of their work at this time, notwithstanding their possible exposure to the virus itself. They may experience stigma from different sectors of society – even among their own families, close friends, co-workers and law enforcers. This will make an already challenging and stressful situation worse and can interfere with their ability to serve. We must care for them as we would any member of our society.
- All healthcare workers and others in need of a professional who can talk about your mental health, do not hesitate to call the National Center for Mental Health 24/7 Crisis Hotline hotspots 1553 and Philippine Red Cross 24/7 toll-free Suicide Prevention HOPELINE 2919 (for Globe & TM Subscribers) and 0917558 4673 or 804467

HOW DO YOU REMAIN SAFE AND HEALTHY AMIDST THE COVID-19 PANDEMIC?

ALWAYS remember and practice the following:

Wash hands with soap and water for 20 seconds or more (Try singing the chorus of your favorite song while washing).

Use a hand sanitizer with 70% alcohol if you can't wash your hands for 20 seconds or more.

Avoid touching your face, especially your mouth, eyes, nose.

Make sure you keep 1 meter distance from other people.

Avoid touching things that many people touch like door handles, tables, chairs, etc.

Wear a mask while outside.

Frequently clean surfaces in your house, work or business. This includes tables, doorknobs, light switches, countertops, handles, desks, phones, keys, keyboards, toilets, faucets, and sinks.

Disinfect using a bleach solution (7 tablespoons [100 mL] bleach for 1 liter of clean water).

Disinfect your most used things (like phone, keys, eyeglasses, keyboard, etc.) with 70% alcohol solution.

TREATMENT

For case management of COVID-19 patients, healthcare providers are advised to adhere to the existing [PSMID Guidelines](#).

POLICY IN-FOCUS

The Department of Health (DOH) has issued Department Memorandum (DM) Number 2020-0429¹, "Guidance on Ventilation for COVID-19 Mitigation" in order to address possible administrative and engineering controls that can be utilized in enclosed, indoor spaces to improve ventilation and lessen transmission of pathogens.

This interim document was developed to update the current non-pharmaceutical interventions against the disease and discuss ventilation, administrative and engineering controls, and their role in reducing viral transmission in this pandemic.
